To assist in the examination, evaluation and comparison of Proposals, the Purchaser may at its discretion, ask the Offeror for clarification of its Proposal. The request for clarification and the response shall be in writing and no change in price or substance of the Proposal shall be sought, offered or permitted.

21. Preliminary examination

The Purchaser will examine the Proposals to determine whether they are complete, whether any computational errors have been made, whether the documents have been properly signed, and whether the Proposals are generally in order.

Arithmetical errors will be rectified on the following basis: If there is a discrepancy between the unit price and the total price that is obtained by multiplying the unit price and quantity, the unit price shall prevail and the total price shall be corrected. If the Offeror does not accept the correction of errors, its Proposal will be rejected. If there is a discrepancy between words and figures the amount in words will prevail.

Prior to the detailed evaluation, the Purchaser will determine the substantial responsiveness of each Proposal to the Request for Proposals (RFP). For purposes of these Clauses, a substantially responsive Proposal is one which conforms to all the terms and conditions of the RFP without material deviations. The Purchaser's determination of a Proposal's responsiveness is based on the contents of the Proposal itself without recourse to extrinsic evidence.

A Proposal determined as not substantially responsive will be rejected by the Purchaser and may not subsequently be made responsive by the Offeror by correction of the non-conformity.

22. Evaluation and comparison of proposals

A two-stage procedure will be utilised in evaluating the proposals, with evaluation of the technical proposal being completed prior to any price proposal being opened and compared. The price schedule/financial proposal of the Proposals will be opened only for submissions that passed the minimum technical score of 70% of the obtainable score of 700 points in the evaluation of the technical proposals.

The technical proposal is evaluated on the basis of its responsiveness to the Terms of Reference (TOR) and the Instructions to Offerors.

In the Second Stage, the price proposal of all contractors, who have attained minimum 70% score in the technical evaluation, will be compared. The **cumulative analysis scheme** will be applied with a total score being obtained upon the combination of weighted technical and financial attributes. An Offeror's response to the solicitation document is evaluated and points are attributed based on how well they meet the defined desirable criteria. Cost under this method of analysis is rendered as an award criterion, which will be 30% out of a total score of 1000 of all the desirable factors of the RFP. The contract will be awarded to the offeror obtaining the highest cumulative score. The following formula will be applied in calculating the cumulative score:

$$B = T + \frac{C_{low}}{C} \times 300,$$

where

T – is the total technical score awarded to the evaluated proposal;

C – is the price of the evaluated proposal; and

C_{low} – is the lowest of all evaluated proposal prices among responsive proposals.

Background

The United Nations Development Programme (UNDP), acting as an implementing agency of the Global Environment Facility (GEF), is providing assistance to the Moldovan Ministry of Ecology and Natural Resources in the implementation of the GEF Medium Size Project (MSP) “Improving coverage and management effectiveness of the Protected Area System in Moldova”. The protected area system of Moldova is not uniformly distributed in the landscape and there are substantial gaps, particularly in terms of steppe habitats, that need to be addressed to ensure the adequate representation of the main types of ecosystems. Protected areas are also highly fragmented in the landscape and are not achieving the conservation objectives for landscape-scale ecological processes. The project aim to enhance the coverage and management effectiveness of the protected area system of Moldova by piloting - within the broader framework of the National Environmental Network - the establishment of the first National Park in Moldova, and by strengthening the capacities at the systemic, institutional and individual levels to establish and manage a representative protected area system. Thus, the GEF-funded developmental interventions will lead to creation of an enabling framework for the expansion of the protected area system to include under-represented ecosystems in Moldova. The project is structured into two **outcomes**:

Outcome 1 Improving representativity and coverage of the protected area system

Outcome 2 Strengthening the capacity of PA institutions to effectively manage the protected area system.

Scope of the assignment

The service provider will be responsible for assisting the MENR in reviewing, revising and reforming the current biodiversity significance of, and conservation management arrangements for, the individual protected areas making up the protected areas system of Moldova. The service provider will cooperate with the forestry and administrative authorities and other agencies involved in the project implementation, as well as with representatives from academia, environmental NGOs in defining priority biodiversity issues and areas that should be key project issues.

Scope of Work

In the domain of flora the service provider will conduct field surveys in the protected areas in Moldova to support the vegetation investigation within the areas, including the dominant, rare, protected plants species, the abundance of dominant species for the GIS vegetation map, taking their coordinates (in electronic format as well), compiling the scientific data for the protected areas, writing the report in context of concluded field works.

In the domain of fauna the service provider will conduct field surveys in the protected areas to support the zoological investigations within the areas, giving a habitat typology for aforementioned species, including mammals, reptiles and insects with specification of the species, habitat, the dominant, rare, protected species for the GIS fauna map, taking their coordinates (in electronic format as well), compiling the scientific data for the protected areas, writing the report in context of concluded field works.

Further, the service provider will be responsible for preparing, in close collaboration with PA planning and management consultant, explicit recommendations on the proposed management arrangements, boundaries, level of protection and operational management interventions required for each PA. In collaboration with the responsible institutions, he/she will complete the METT scorecard for the individual PAs (or groups of PAs) in the PAS. Collaboratively develop time-based targets for improving the METT scores.

The service provider will involve a range of national and local stakeholders in the conservation management assessment of each protected area and in making recommendations for any amendments. The service provider will work in close collaboration with all involved Local and International Consultants and will facilitate regional stakeholder workshops (organisation and logistics will be the responsibility of the project team), where the results of the field investigations will be presented, management recommendations provided, guidance for an improved management offered.
