#### **21. Preliminary examination**

The Purchaser will examine the Proposals to determine whether they are complete, whether any computational errors have been made, whether the documents have been properly signed, and whether the Proposals are generally in order.

Arithmetical errors will be rectified on the following basis: If there is a discrepancy between the unit price and the total price that is obtained by multiplying the unit price and quantity, the unit price shall prevail and the total price shall be corrected. If the Offeror does not accept the correction of errors, its Proposal will be rejected. If there is a discrepancy between words and figures the amount in words will prevail.

Prior to the detailed evaluation, the Purchaser will determine the substantial responsiveness of each Proposal to the Request for Proposals (RFP). For purposes of these Clauses, a substantially responsive Proposal is one which conforms to all the terms and conditions of the RFP without material deviations. The Purchaser's determination of a Proposal's responsiveness is based on the contents of the Proposal itself without recourse to extrinsic evidence.

A Proposal determined as not substantially responsive will be rejected by the Purchaser and may not subsequently be made responsive by the Offeror by correction of the non-conformity.

## 22. Evaluation and comparison of proposals

A two-stage procedure will be utilised in evaluating the proposals, with evaluation of the technical proposal being completed prior to any price proposal being opened and compared. The price schedule/financial proposal of the Proposals will be opened only for submissions that passed the minimum technical score of 70% of the obtainable score of 700 points in the evaluation of the technical proposals.

The technical proposal is evaluated on the basis of its responsiveness to the Term of Reference (TOR) and the Instructions to Offerors.

In the Second Stage, the price proposal of all contractors, who have attained minimum 70% score in the technical evaluation, will be compared. The **cumulative analysis scheme** will be applied with a total score being obtained upon the combination of weighted technical and financial attributes. An Offeror's response to the solicitation document is evaluated and points are attributed based on how well they meet the defined desirable criteria. Cost under this method of analysis is rendered as an award criterion, which will be 30% out of a total score of 1000 of all the desirable factors of the RFP. The contract will be awarded to the offeror obtaining the highest cumulative score. The following formula will be applied in calculating the cumulative score:

$$B = T + \frac{C_{low}}{C} \times 300,$$

where

*T* – is the total technical score awarded to the evaluated proposal;

*C* – is the price of the evaluated proposal; and

*C<sub>low</sub>* – is the lowest of all evaluated proposal prices among responsive proposals.

#### **Background**

The United Nations Development Programme (UNDP), acting as an implementing agency of the Global Environment Facility (GEF), is providing assistance to the Moldovan Ministry of Ecology and Natural Resources in the implementation of the GEF Medium Size Project (MSP) “Improving coverage and management effectiveness of the Protected Area System in Moldova”. The protected area system of Moldova is not uniformly distributed in the landscape and there are substantial gaps, particularly in terms of steppe habitats, that need to be addressed to ensure the adequate representation of the main types of ecosystems. Protected areas are also highly fragmented in the landscape and are not achieving the conservation objectives for landscape-scale ecological processes. The project aim to enhance the coverage and management effectiveness of the protected area system of Moldova by piloting - within the broader framework of the National Environmental Network - the establishment of the first National Park in Moldova, and by strengthening the capacities at the systemic, institutional and individual levels to establish and manage a representative protected area system. Thus, the GEF-funded developmental interventions will lead to creation of an enabling framework for the expansion of the protected area system to include under-represented ecosystems in Moldova. The project is structured into two **outcomes**:  
Outcome 1 Improving representativity and coverage of the protected area system  
Outcome 2 Strengthening the capacity of PA institutions to effectively manage the protected area system.
